Industry Insights ACHR The News

The Importance of Female Leadership in HVAC

The gender gap is well-documented in the HVAC industry, where only an estimated 2% of employees are women. However, the tide is starting to turn and women are breaking barriers and reshaping the HVACR industry. Discover how women are driving change and innovation in HVACR, paving the way for a more inclusive future.

Company Updates

ECM Technologies recently partnered with Tolin Mechanical and Service Logic for a collaborative event focused on sharing insights and strategies. This gathering strengthened relationships and reinforced a commitment to industry innovation. Events like these highlight the power of collaboration in advancing the HVAC industry. We're excited to continue building on these strong partnerships.

Industry Expert Q&A

Michael Daly, PE

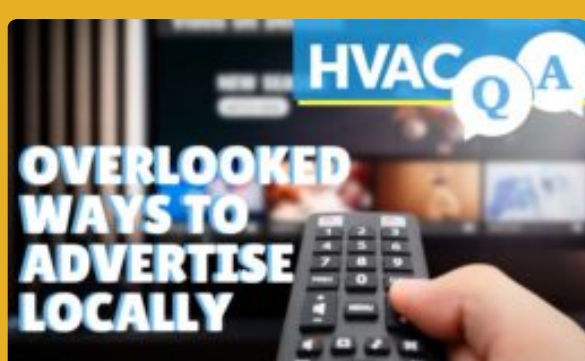

Chief Technology Officer
ECM Technologies

Q: Why is it important for facility managers to address oil-fouling?

A: Oil-fouling reduces the efficiency of HVAC systems by creating an insulating barrier on heat exchanger coils, forcing the system to work harder and consume more energy. This leads to higher operational costs, increased wear and tear and a shorter lifespan for the equipment. This troubling discovery is the foundation of ECMT and the creation of ThermaClear®.

ThermaClear® clears away this oil coating and creates a barrier to future buildup. A single treatment improves energy efficiency, lowers costs and extends the life of HVAC systems, ensuring reliable performance and sustainability for the remaining lifetime of the system.

HVAC Business Tip

HVAC businesses can reduce seasonal dependence by offering year-round services like maintenance agreements, indoor air quality upgrades, and monitoring. Diversifying in this way helps stabilize revenue, prevent burnout, and boost profits. Start with one new service, then expand gradually.
